# INTRODUCTION

One function of the California State Department of Education is to collect, compile, and disseminate statistics on elementary and secondary education. To achieve this function, the Department created the California Basic Educational Data System, including a data collection and analysis unit, which, as part of its task, provides current and historical statistics through a series of annual reports.

This annual report, Selected Education Statistics, 1984-85, contains summary information from a variety of data related to educational topics: number and types of schools and school districts in California; enrollment history and projections for both public and private schools; descriptive data about the state's 25 largest school districts; average teacher salaries; and selected data about California compared with similar national data. These statistics are organized into three sections: School District Organization and Schools; Students; and Staff.

Additional statistical and comparative data may be obtained, at cost, from the CBEDS Unit, Program Evaluation and Research Division, California State Department of Education, 721 Capitol Mall, Sacramento, California (mailing address: P.O. Box 944272, Sacramento, CA 94244-2720).

## Section I - School District Organization and Schools

California's public school districts are organized as (1) elementary districts, generally serving students in kindergarten through grade eight; (2) high school districts, generally serving students in grades nine through twelve; or (3) unified districts, serving students in kindergarten through grade twelve. Trends in the data contained in this section are:

* Over the past three decades, financial incentives have brought about a reduction in the total number of school districts--from 2,091 in 1950-51 to 1,029 in 1984-85.

* During 1984-85, the enrollment size of districts ranged from five students to 562,793 students.

* Although the number of private schools increased by more than 99 percent over the last decade, 34 percent of the total number of private schools in 1984-85 had ten or fewer students.

* More than 55 percent of the districts provided 175 days of student instruction, the minimum number of days prescribed by law in 1984-85. Another 30 percent of the districts offered 176 days, and one district conducted school for 181 days.

* The 25 largest school districts enrolled nearly 34 percent of the state's public school students and employed 35 percent of the certificated personnel employed by the state's school districts.

** In 1983-84 there were 1,029 school districts, 36 of which had approval for a school in their district to operate fewer days than the rest of the schools in the district because of emergency conditions or other considerations. Data-entry guidelines for attendance documents made it necessary to report the data for these schools as separate districts for this table.

Section II - Students

Student enrollments in both public and private schools in the state declined annually from 1975 through 1981. This trend was reversed in 1982, and annual enrollment increases are projected to continue through 1994. Other trends in the data contained in this section are:

* Minority students accounted for 25 percent of the student population in 1967, and in 1984 they comprised 47 percent. During this period the percent of Hispanic students increased from 13.9 to 27.9 percent of the student population.

* California's annual language census of students indicated that the number of language-minority students increased by 13 percent between 1982-83 and 1984-85. Within this group the largest percentage increase occurred among Hmong-speaking students.

* Compared to the number of seventeen-year-olds in the general population, the percent of public and private high school graduates decreased from 75 percent in 1973 to 63 percent in 1983. A portion of this decline may be attributed to more students taking and passing the California High School Proficiency Examination, because those who pass the exam and receive a diploma are not counted in the total of high school graduates.

Section III - Staff

The number of teachers employed in public schools parallels student enrollment trends. The increasing enrollments beginning in the 1982 school year have led to an increase of 6 percent in the number of full-time-equivalent teachers since 1981. Also during this period the average salary for teachers has increased by 17 percent. Other trends in the data contained in this section are:

* The number of classified employees in public schools continues a decline begun in 1981.

* The number of minority certificated employees continues to increase, from 11.9 percent of the total in 1973 to 18.1 percent in 1984.

* Although the average teacher salary has continued to rise in actual dollars since 1974, the purchasing power represented by the average salary has decreased by 9.8 percent when adjusted to the consumer price index.

* Comparisons of 1984 secondary teachers by subject area with national data for 1981 indicate higher percentages for California in special education, health and physical education, and foreign languages.

* The average class size for students in grades one through three and the pupil-teacher ratios for grades four through eight have remained relatively stable over the past ten years.
